| TITLE:  New Release PRINTIT Utility                            |
|_____|

| Purpose |
|_____|
To provide documentation to users for new release of inhouse utility
'PRINTIT'.

| Definitions  |
|_____|
PRINTIT - a locally written utility which will provide a file dump in
EBCDIC and/or HEX format.

| Method of Use  |
|_____|
The Utility PRINTIT has been rewritten to drop support for ISAM and
incorporate native VSAM support for KSDS and ESDS data sets.  This
rewrite necessitates changing the parm field of the exec statement in
current JCL to process VSAM files.  Current control card format is still
usable though free-form positional control keywords as documented in the
attachment are also valid.

| Implementation   |
|_____|
The new PRINTIT will be copied to SYS1.LOADLIB February 1, 1982.  For
those who would like to use this new version prior to that date, PRINTIT
is currently available by use of a STEPLIB card to SYS5.TESTLIB.

        This document is the current version of Advisory  2.13.7029
        that had been issued by the Comptrollers Data Processing Division
